

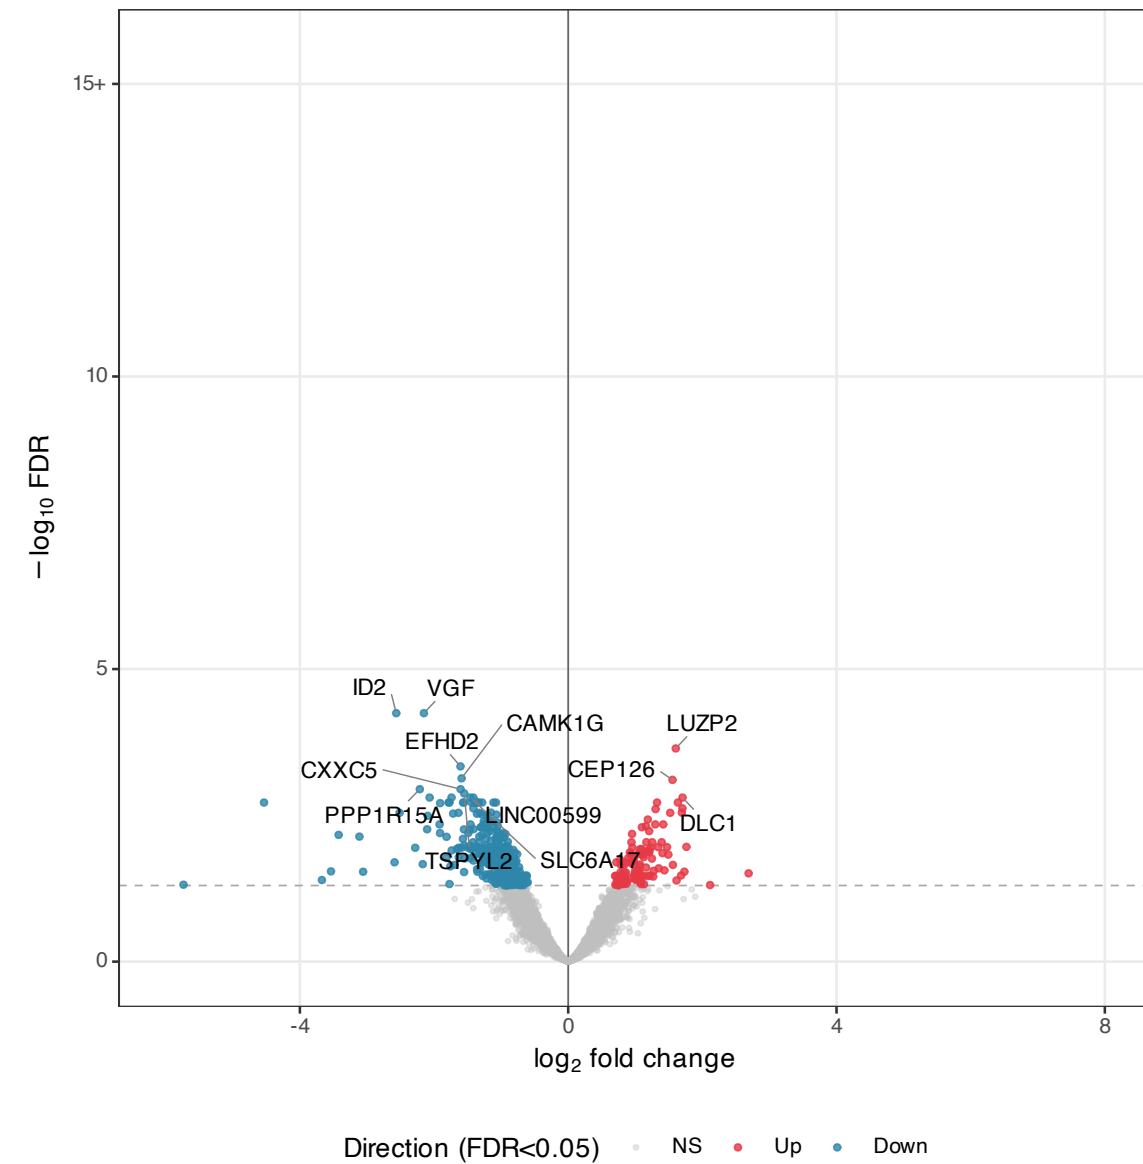

## Figure 2. Discovery of AD and GBM single-cell signatures

Differential expression analysis of vulnerable AD neurons (Stage 1) and GBM neural-mimicry cells (Stage 2)

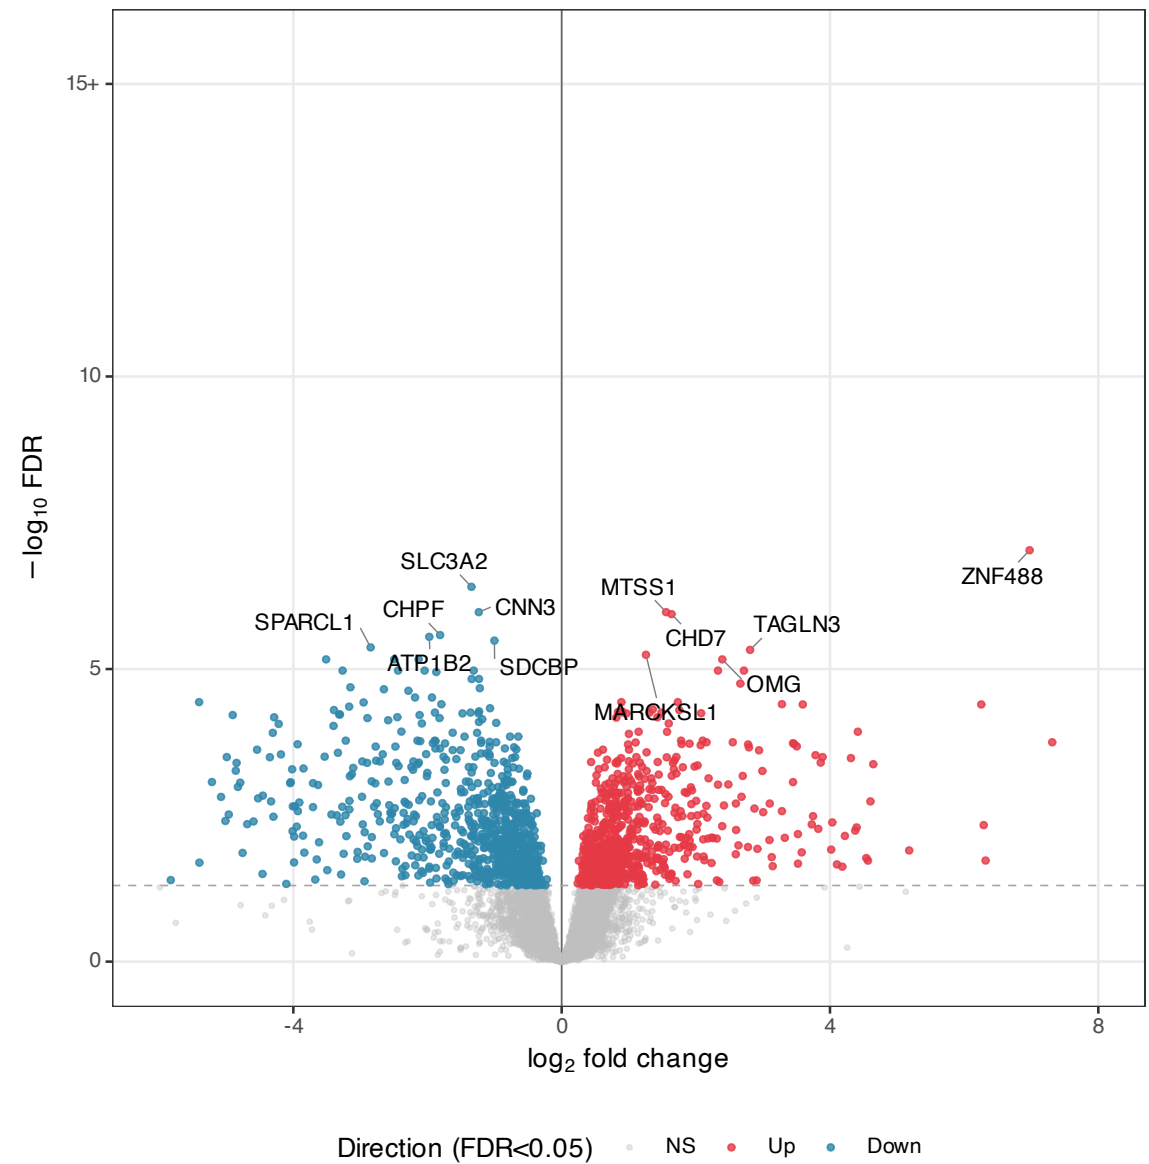

### A. AD vulnerable RORB+ excitatory neurons

Leng et al. 2021 (Braak V-VI vs 0-II) | 486 significant DEGs (104 up, 382 down)

### B. GBM neural-mimicry (NPC-like + OPC-like)

Neftel et al. 2019 (NeuralLineage vs Other) | 1576 significant DEGs (765 up, 811 down)

### C. Signature composition

Number of significant DEGs (FDR<0.05) by direction
